Billboard Message in **Says**
Lakeland, Florida # 2

J. T. Smith

“Don’t Believe In God? You Are Not Alone”

Fact # 3 ~ All Scientists are not evolutionists A group called *The Creation Research Society* has a membership of more than 300 scientists, each having a Ph. D. or M.S. degree in his field of study and work. The fact that many scientists are not evolutionists proves that there is no evidence in science which would demand that one accept the theory.

Fact # 4 ~ There had to be a first cause “Where did God come from?” Answer: “He didn’t come from anywhere. He has always existed.” Impossible to comprehend? Yes! Consider the universe. Something cannot come from nothing. But - Something exists – Thus - Something (or someone) has always been.

Fact # 5 ~ Design demands a designer. Many examples could be given. I have chosen the universe as an example of those who have faith in God.

We live in a tremendously large Universe. While its outer limits have not been measured, it is estimated to be as much as 20 billion light years in diameter (i.e., the distance it would take light to travel across the Universe at a speed of over 186,000 miles per second).

There are an estimated one billion galaxies in the Universe, and an estimated 25 sextillion stars. The Milky Way galaxy in which we live contains over 100 billion stars, and is so large that even traveling at the speed of light would require 100,000 years to cross its diameter.

If we drew a map of the Milky Way galaxy, and represented the Earth and Sun as two dots one inch apart (thus a scale of one inch equals 93 million miles — the distance between the Earth and the Sun), we would need a map at least four miles wide to locate the next nearest star, and a map 25,000 miles wide to reach the center of our galaxy. (Part 1 was in last week’s Tribune) (The above information was taken from Apologetics Press)
